A14 Improvement Scheme Supports the Cambridge Launchpad Event

This week nearly 40 young people from Cherry Hilton Primary School and the Home Education Network visited Swavesey compound.

The event was part of the Cambridge Launchpad programme, led by Cambridge-based science and technology companies which invest their talent and resources to inspire boys and girls to consider STEM careers.

Students were welcomed to the project by a host of STEM ambassadors from eight different sections of the A14 project and enjoyed practical activities based on many aspects of the A14 works, throughout the day.

These included fun tasks based on Archaeology, Ecology, BIM Design, Engineering Surveying, Materials Testing, Plant Appreciation and Traffic Management

A huge thank you must go to all the STEM ambassadors for planning and organising the day so brilliantly.

Rhian Lawton, Skills co-ordinator said 'I am sure that we will have motivated more than a few young people to consider our sector in the future and they'll be more likely to look up the next time they travel along the A14.'
